## PURCHASING POLICY FOR SUSTAINABILITY AND COMMON BENEFIT

Following the CHANGE campaign undertaken in 2019 and consistent with the corporate mission, Terratinta Group Srl SB in October 2020 formalised the amendment to its Statute to become a Benefit Company, strongly and formally reaffirming its commitment to contributing concretely to a sustainable future for its team, the community and the environment.

Becoming a Benefit Company introduces Terratinta Group into a circle of companies that have chosen to distinguish themselves through a virtuous and innovative legal form.

An important milestone that has made it possible to highlight in its Statute the specific aims of common benefit that the company intends to pursue in a responsible, sustainable and transparent manner, consistent with the company's values.

- Pursuing corporate welfare that gives satisfaction to the people working within the professional family through physical and intangible elements that improve the relationship between private life and work;
- Nurture relationships with suppliers and customers that are always permeated by strong ethics, professionalism and respect for the parties;
- Pursue environmentally sustainable activities on the part of the company both internally and in its behaviour towards the outside world;
- Helping the external community in local areas, with organisational and economic support, particularly in the field of sport and towards children.

Terratinta Group Srl SB is thus committed to promoting these principles also within its Supply Chain, committing itself, where appropriate and possible

- to give priority to Suppliers that have adopted ethical and sustainable practices within their organisation;
- include sustainability criteria as part of the supplier evaluation process;
- to purchase goods and services that reflect appropriate and recognised environmental specifications or standards to pursue continuous improvement of internal supply practices;
- to promote a level of collaboration and awareness of sustainability among Supply Chain partners and encourage them to adopt sustainable practices;
- to promote the supply of materials, products and services from local markets;
- to reduce waste and the use of non-renewable resources by identifying and eliminating, where possible, wasteful practices in internal and external operations, giving priority to goods that provide the greatest benefits in the circular economy.
